The Danfoss Link™ SCM (Simple Communication Module) is an electronic controller for turning the Away function ON/OFF in a Danfoss Link™ system.

The Danfoss Link™ SCM is powered by 230 V~.

### Installation

The Danfoss Link™ wireless system’s transmission range is sufficient for most applications; however each building has different obstacles affecting communication and maximum transmission distance.

If communication problems occur Danfoss suggests to support the system with repeaters. In exceptional cases the wireless system may not be suitable for your installation.

*Note: Be aware that installation and placement must be according to local building regulations.*

### Mounting

![Mounting Diagram](image-url)
Wiring

To add the Danfoss Link™ SCM to a system, perform the following:

1. When adding, press and release the install button, and observe that the LED gives a fast green flash.
2. If adding is successful, the LED turns green (HOME) or red (AWAY) permanently, depending on the input stage.

For further information, see the Danfoss Link™ CC installation guide.

Note: If adding the Danfoss Link™ SCM to the Danfoss Link™ CC is unsuccessful, make sure the right Danfoss Link™ CC software version is applied. Correct version: 2.5.57 or higher.

Note: Refer to the Danfoss Link™ Mobile Phone Butler (Danfoss Link™ MPB) manual for wiring connections to the Danfoss Link™ MPB.
Perform network test

Once the Danfoss Link™ SCM and all other devices in the system have been registered and the Danfoss Link™ CC is placed in its final position, perform a full network test (see separate Danfoss Link™ CC manual).

Transmission test (optional)

Initiate a transmission test on the Danfoss Link™ SCM by pressing and holding the install button for more than 2 seconds. If the test is satisfactory, the green LED will flash and a message is displayed on the Danfoss Link™ CC. If the test fails the red LED will slow flash continuously.

Factory reset

Turn off the power to the device, then press and hold the install button in front of the device for approx. 5 seconds while the power is switched on again. The button must be held until LED gives a red flash.

Status indicator

Getting started with Danfoss Link™ SCM

The away temperature can only be set on the Danfoss Link™ CC, default setting is 15° C.

A SIM-card for the Danfoss Link™ Mobile Phone Butler is not included. Before inserting the SIM-card please remember to disable the PIN-code.

System test

After installation it is recommended to perform a system test by texting (0000#0) to the Danfoss Link™ MPB in order to set the Danfoss Link™ system to AWAY mode (OFF).

On the Danfoss Link™ MPB and the SCM the AWAY mode is indicated by a red LED. On the Danfoss Link™ CC the AWAY mode is indicated by the suitcase icon.

After 10 minutes the AWAY mode screen will be replaced by the Standby screen for security reasons.

Send another text message (0000#1) to revert the system to the HOME mode (ON). The LED turns green and the AWAY icon disappears. See the Danfoss Link™ MPB User Manual for further information.

Smartphone app

For Android phones and iPhones you can download the Danfoss ButlerApp for easy communication with the Danfoss Link™ MPB.

Other ON / OFF devices like sensors, manual switches, etc. can also be used and connected to the SCM for turning AWAY mode ON / OFF in the Danfoss Link™ system. The ON / OFF device must be connected to the SCM via its NC and COM slots.
