**Danfoss Link** takes full control of your heat pump.

Make your home more advanced. Equip it with a smart, integrated energy control system that adapts to any of your needs or preferences. Go for the only integrated system of energy management from heat production to individualised control in separate rooms.

### Maximum convenience and control

The Central Control Unit is now compatible with your heat pump and is the only solution offering full control over your entire heating system. The energy use in each room can be managed separately and adjusted to your personal needs via a number of options such as daily and weekly schedules. For extra reductions in energy use you can set a minimum temperature when you are away for extended periods, or at night. This allows effortless, significant savings. Not only can you now easily adjust the temperature in the entire house from one place – you can also optimise your heat pump’s operation according to the current conditions of your heating system. It’s all within your reach from anywhere you want to be, anywhere around the house. This red dot design award winner fits in any space, giving you a modern combination of functionality and perfect looks.

### New saving possibilities

No matter how many rooms there are in the house, the size of your home, or the exterior conditions, **Danfoss Link**’s new features are ideal. They make it possible to adapt heat production from the pump to any situation, suiting your family’s preferences exactly. Not only can you adjust the temperature for your own comfort, you also have full control over your home’s source of energy. **Danfoss Link** communicates continuously with the heat pump. That means the fully integrated system is optimised for current conditions, using as little energy as possible at every stage. As a result, your investment can bring you up to 50-75% energy savings.
